Attic apartment

Light, curved upholstery and glass globes

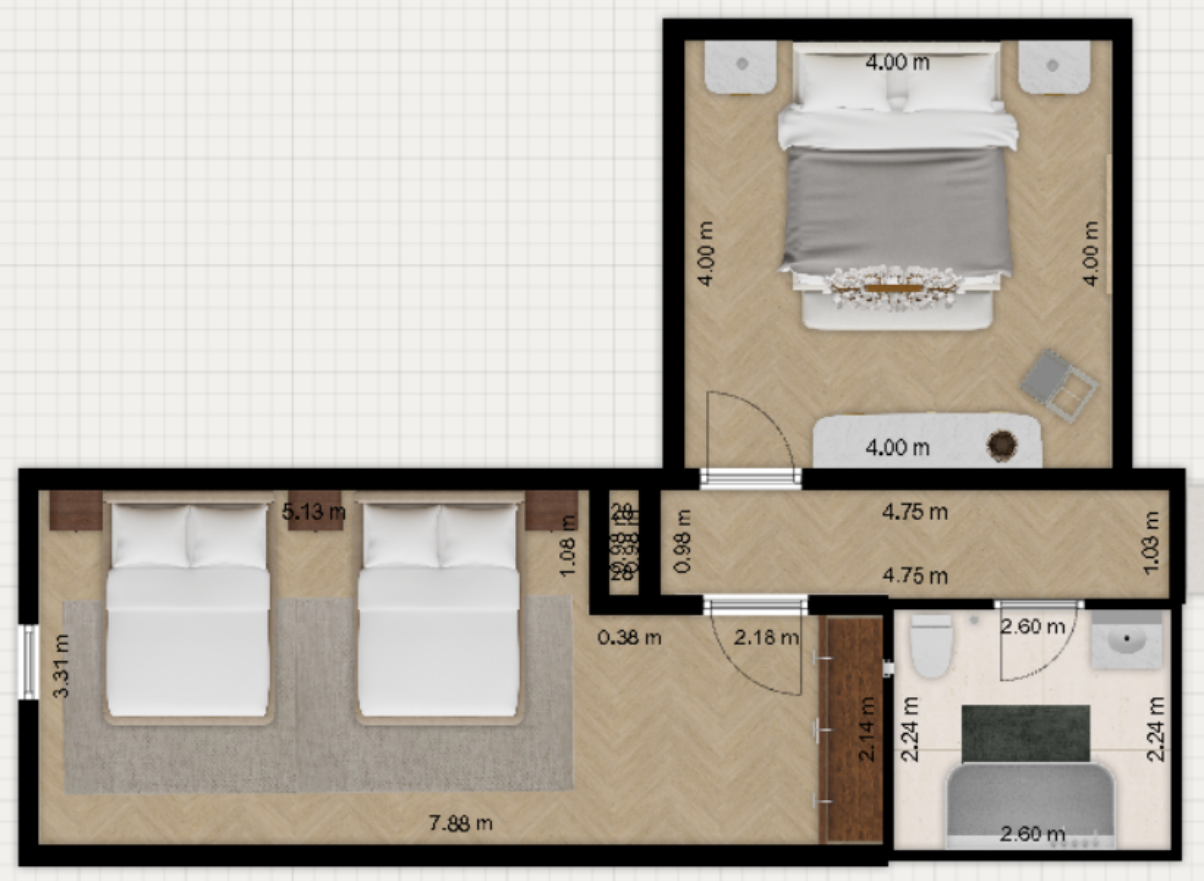

CONNECTION TO THE LOWER FLOOR

Ivory, subtle decorative mouldings, natural oak and champagne-toned metal. Soft curved beds, layered textiles and glass-globe pendant lights create a calm, luxurious interior.

Layout and roof

The upper-floor design follows the supplied plan: a north bedroom with one double bed, a south room with two double beds, a connecting corridor and a separate bathroom.

ATTIC

The living rooms and corridor have two opposing roof slopes beginning approximately 130 cm above the floor and rising towards the ridge. The bathroom has a flat ceiling and vertical walls. Ridge directions and slopes are spatial proposals; the plan includes no roof section.

OPENINGS AND LIGHTING

The only window shown is in the west wall of the room with two double beds. No new windows or rooflights are added elsewhere. Illuminated globe lights, backlit mirrors and concealed LEDs complete the atmosphere.

Main bedroom

The double bed with a curved upholstered headboard stays against the north wall. Two bedside tables, a bench at the foot and a small seating area are complemented by opposing roof slopes. Soft lighting replaces a window not shown in the plan.

Overall view

Another angle of the same room

Room with two double beds

Both double beds stand side by side with headboards against the north wall. The only west-facing window brings in sunlight. The eastern part retains a clear passage and a wardrobe against the bathroom partition; opposing roof slopes enclose the attic.

Overall view

Another angle of the same room

Bathroom

The bathtub against the south wall, toilet in the northwest corner and washbasin in the northeast follow the reference. Pale stone, oak and a backlit mirror unify the design. The bathroom has a flat ceiling, no roof slopes and no window.

Overall view

Another angle of the same room

Connecting corridor

The narrow corridor links both bedrooms and the bathroom to the staircase. Two opposing roof slopes, pale mouldings and globe lights maintain the interior connection without adding more furniture.
